community policy

Plan Components*

'Brochure' Site
getfedora.org

User-focused; informational; provides downloads for the three editions.

User Support Site
getfedora.org/help OR
help.getfedora.org

Reskin of ask.fedoraproject.org OR more integrated standalone site using ask.fpo API

Fedora Hubs
fedoraproject.org OR
hubs.fedoraproject.org

Contributor-focused; almost like a Fedora project “intranet”

Developer Portal
developer.fedoraproject.org

Upstream (not Fedora) developer-focused, for helping developers using Fedora

Spins Revamp
spins.fedoraproject.org
labs.fedoraproject.org
arm.fedoraproject.org

Redesign the spins website to match the new brochure site; split out different types of spins into their own sites.

* Some of this plan originated as long ago as the 2009 website revamp. See <http://url.ca/ncots>

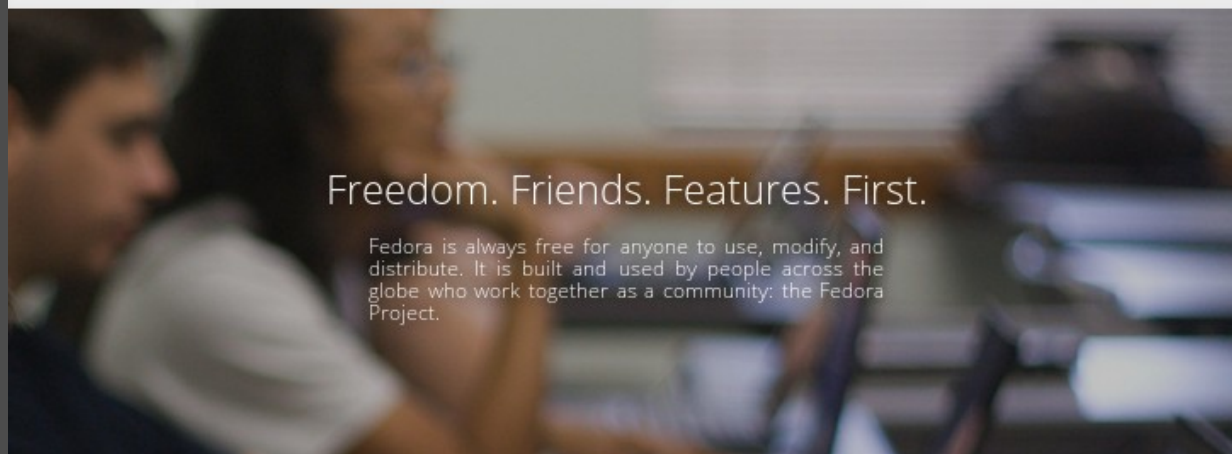

Brochure Site

The screenshot shows the top of the Fedora website. On the left is the Fedora logo (a blue circle with a white 'f'). On the right is the word 'fedora' in a blue sans-serif font. Below this is a large grey banner with the text 'Fedora is now more focused' and 'Less setup, more innovation. Choose a flavor of Fedora streamlined for your needs, and get to work right away.' Below the banner are three columns, each with a circular icon and a title: 'WORKSTATION' (laptop icon), 'SERVER' (server rack icon), and 'CLOUD' (cloud icon). Each column has a short paragraph of text describing that flavor.

A Fedora website to allow new and existing users to learn about Fedora (the Operating System) and to be able to download it.

We call it a 'brochure' site because it's informational and aimed at people who have never heard of Fedora before and want to learn more about what it is. It's also aimed at people who know what Fedora is and use it, but who simply want to download it and get on with their lives. It's not primarily aimed at contributors.

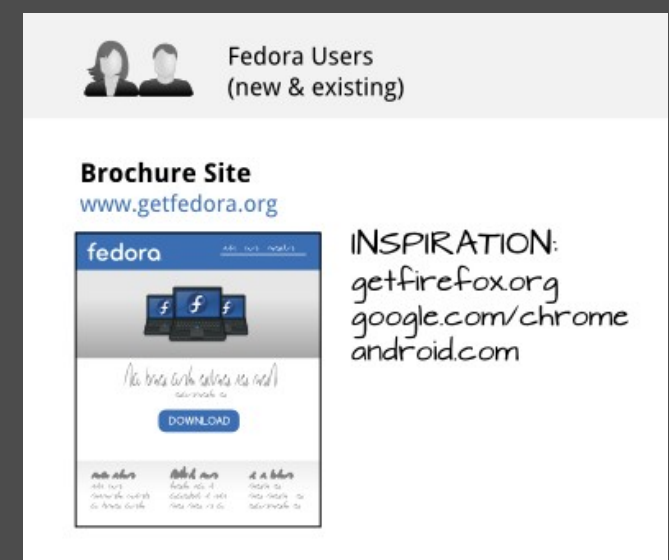

The screenshot shows the main content area of the website. The background is a blurred image of people working together. The text 'Freedom. Friends. Features. First.' is prominently displayed in the center. Below it is a paragraph: 'Fedora is always free for anyone to use, modify, and distribute. It is built and used by people across the globe who work together as a community: the Fedora Project.'

Keep up to date with Fedora

Stay connected with the Fedora Project and get all the latest news and reports in [Fedora Magazine](#).

Fedora Documentation

Check out the [Release Notes](#) for detailed information on the current release. To learn more about using Fedora and details such as system requirements, see the [official documentation](#).

The screenshot shows a section of the website titled 'Fedora Users (new & existing)'. Below this is a sub-section titled 'Brochure Site' with the URL www.getfedora.org. To the right of this is the text 'INSPIRATION: getfirefox.org, google.com/chrome, android.com'. Below the 'Brochure Site' text is a small image of the brochure site itself, which features the Fedora logo, the text 'Fedora is always free for anyone to use, modify, and distribute.', and a 'DOWNLOAD' button. At the bottom of the brochure site image are three columns of text: 'new users', 'help us', and 'a better', each with a small icon and a short paragraph.

Brochure Site

WORKSTATION fedora

This is the Linux workstation you've been waiting for.

[Download now](#)

Fedora Workstation is a reliable, user-friendly, and powerful operating system for your laptop or desktop computer. It supports a wide range of developers, from hobbyists and students to professionals in corporate environments.

"The plethora of tools provided by Fedora allows me to get things done. It just works."
— Christine Flood, JVM performance engineer

Sleek user interface
Focus on your code in the GNOME 3 desktop environment. GNOME is built with developer feedback and minimizes distractions, so you can concentrate on what's important.

Complete open source toolchain
Skip the drag of trying to find or build tools. With Fedora's complete set of languages, tools, and utilities, everything is available quickly to the community.

GNOME Boxes & other virt tools
Get virtual machines up and running quickly to test your code on multiple platforms using GNOME Boxes. Or dig into powerful, scriptable virtualization tools for even more control.

CLOUD fedora

Lean. Powerful. Everycloud ready.

Build scale-out computing and utilize the next generation of container deployment with Fedora Cloud.

[Download now](#)

"Fedora 22 gives me the balance I'm looking for in an edge operating system with enterprise-level provisioning and configuration."
— Major Hayden, Principal Architect at Rackspace

Minimal, fast, flexible
Everything you need, and nothing you don't. The Fedora Cloud Base image is smaller, so you can deploy faster. Then use the universe of services and tools in Fedora to customize, so your cloud is right for you.

Public or private
Deploy and run Fedora Cloud in public or private infrastructure, using the industry standard OpenStack Heat. Wherever you run your code, go.

Designed for containers
Want easy, scalable app deployment? Fedora Atomic Host is optimized and streamlined to run Docker containers out of the box. Whether you're rolling out a handful of containers, or scaling up to meet incredible demand, you can do it with Fedora Atomic Host.

SERVER fedora

The latest technology. A stable foundation. Together, for your applications and services.

[Download now](#)

"The simplicity introduced with rolekit and cockpit have made server deployments a breeze. What took me a few days on other operating systems took less than an hour with Fedora 22 Server. It just works."
— Dan Mossor, Systems Engineer

Fedora Server is a powerful, flexible operating system that includes the best and latest datacenter technologies. It puts you in control of all your infrastructure and services.

Cockpit
Manage your system easily with Cockpit's powerful, modern interface. View and monitor system performance and status, and deploy and manage container-based services.

Server Roles and Rolekit
There's no need to set up your server from scratch when you use server roles. Server roles plug into your Fedora Server system, providing a well-integrated service on top of the Fedora Server platform. Deploy and manage these prepared roles simply using the Rolekit tool.

OpenLMI tools
Manage a wide variety of system parameters with OpenLMI. Simplify administration using its unified command set and powerful Python scripting interface.

FreeIPA identity management
Level up your Linux network with advanced identity management. Manage users, systems, and policy throughout your environment with FreeIPA, the engine that drives Fedora Server's Domain Controller role.

Brochure Site: Status

The screenshot shows the new Fedora brochure site layout. At the top left is the Fedora logo (a lowercase 'f' in a circle), and at the top right is the word 'fedora'. Below this is a blue banner with the text: 'Fedora is now more focused. Less setup, more innovation. Choose a flavor of Fedora streamlined for your needs, and get to work right away.'

The main content area features three columns, each with a colored square icon and a 'DOWNLOAD NOW' button:

- WORKSTATION** (green icon): Fedora Workstation is a polished, easy to use operating system for laptop and desktop computers, with a complete set of tools and helpers for developers and makers of all kinds.
- SERVER** (orange icon): Fedora Server is a powerful, flexible operating system that includes the best and latest datacenter technologies. It puts you in control of all your infrastructure and services.
- CLOUD** (purple icon): Fedora Cloud provides a minimal image of Fedora for use in public and private cloud environments. It includes just the bare essentials, so you get enough to run your cloud application -- and nothing more.

Below this is a section with four circular icons representing core values: FREEDOM (blue), FRIENDS (pink), FEATURES (orange), and FIRST (green). Below these icons is the text: 'Fedora is always free for anyone to use, modify, and distribute. It is built and used by people across the globe who work together as a community: the Fedora Project.'

The bottom section is titled 'Want more Fedora options?' and includes the text: 'The Fedora community also releases ARM images, alternate live Spins, and other variations of Fedora tailored to specific requirements. Browse them at the Fedora Spins or Fedora Labs website.' Below this text are icons for 'sugar' and 'Xfce'.

The new Fedora brochure site launched with Fedora 21.

We're mostly in maintenance mode now; the general site layout is set and we will make additions / changes as the working groups want to update information about their Fedora editions.

Meghan Richardson, the Fedora UX intern this summer, did a visual redesign of the front page (shown on the left.)

14 Is there a Fedora stable? LTS?

The idea for this site is to be targeted primarily at Fedora users.

It could be a reskin of ask.fpo (although a UX redo is already underway) or involve using ask's API to make a more beginner-friendly front end to ask.fpo.

Later on, Fedora desktop integration with the support site could be cool, so you can ask questions and get notifications when answers to your questions are available from the desktop.

ASK YOUR Q

INSPIRATION:
stackoverflow.com
getsatisfaction

User Support Site: Status

There is currently a Google Summer of Code project with Fedora to revamp ask.fedoraproject.org's UX (Anuradha Welivita is working on this with mentors Sarup Banskota and Suchakra Sharma.)

Part of the GSoC work involves a new skin for ask.fedoraproject.org. However, that work isn't in sync with the Fedora.next websites redesign work. There are a couple of options here, then:

- Make minor tweaks to the new skin of ask.fedoraproject.org to fit the general new Fedora.next look and feel (it's not too far off.)
- Develop a more simplified help portal integrating Fedora's documentation alongside articles from ask.fpo using the ask.fpo API.

No effort is currently being put forth towards either approach at this point in time.

<https://github.com/developer-portal/mockups>

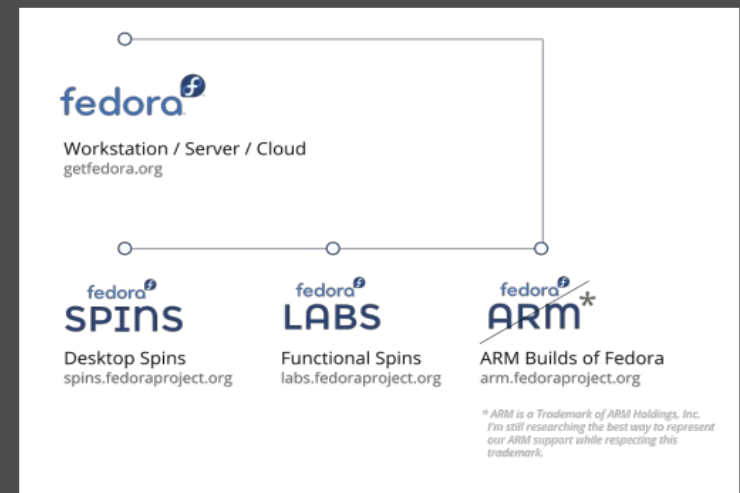

Spins Revamp

The websites team made a decision to split the desktop spins away from the functional spins.

Functional spins will be housed at a new site catered specifically for them: labs.fedoraproject.org.

ARM builds will also have their own one-page site with references to important documentation and the Fedora ARM community as well.

* ARM is a Trademark of ARM Holdings, Inc. I'm still researching the best way to represent our ARM support while respecting this trademark.

Changelog

Fedora Hubs

The screenshot shows the Fedora Hubs website interface. At the top, there's a navigation bar with the 'hubs' logo, a search bar, and user profile 'tatica'. Below the navigation, a banner for the 'fedora DESIGN TEAM' is visible. A purple welcome message reads: 'Welcome to Fedora's Design team! We create graphics and UX designs for use by the Fedora community. We also advocate the use of the FLOSS creative tools that are a part of Fedora. COMMUNITY RULES: 1. Please post only openly-licensed designs. Learn more about licensing here. 2. Please provide SVG or XCF sources for your design submissions. 3. Please be courteous and polite. No personal attacks or rudeness. 4. Have fun! :) For more detail, you can read the full Community Rules & Guidelines.' To the right, a statistics box shows 'MEMBERS 46' and 'SUBSCRIBERS 1,845' with a 'Subscribed' button. Below this is a search bar for the hub and a list of community rules and group owners (tatica, gnokii, mizmo, ryanlerch). The main content area features a post from 'mizmo' titled 'Fedora Design Github org' dated 'Tuesday at 14:10'. The post discusses organizing a Github organization for the Fedora Design team. A chat window on the right shows a conversation between 'gnokii' and 'mizmo' about the organization. At the bottom, a comment from 'Bryan Sutherland' says 'Please add me (iambryan on github) as well :) Cheers'.

The idea for this site is to be targeted primarily at Fedora contributors.

It's an 'intranet' page for the Fedora Project. You work on all these different projects in Fedora, and it's a single place you can get information on all of them as a contributor.

It's also a social network for Fedora contributors. One place to go to keep up with everything across the project in ways that aren't currently possible. We have a lot of places where teams do things differently, and it's a way to provide a consistent contributor experience across projects / teams.

The screenshot shows the 'Community Hub (main)' page at 'hub.fedoraproject.org'. It features a header with 'Contributors (part-time, newer)' and 'Contributors (full-time, old-timers)'. The main content area shows a 'logged out' state with a 'logged in' button. To the right, there's a list of inspiration sources: 'reddit', 'boingboing', 'slashdot', 'deviantart', 'facebook', 'gt', and 'twitter'.

Fedora Hubs: Status

The screenshot shows the user profile for 'duffy' on the Fedora Hubs platform. The profile includes a search bar, a navigation menu with 'me' and 'designteam', and a header with the user's name and a placeholder for a full name. The main content area features a 'Weekly Activity' chart titled 'fedmsg events' showing activity from 1st March 2009 to 14th March 2009. The chart shows a peak in activity on 6th March 2009. Below the chart is an error message: 'Got an error retrieving this widget. Sorry :('. To the right of the chart are statistics for 'FEDMSGs' (2,031) and 'SUBSCRIBERS' (0). Below these are sections for 'Hubs' (listing 'designteam and duffy') and 'Badges' (displaying several achievement icons).

Design and development on Fedora Hubs has been active all of this summer, with Meghan Richardson putting forth a huge effort on the UX design and Ralph Bean working on the development front. (Screenshot of prototype shown, left.)

Development:
<https://pagure.io/fedora-hubs>

Design:
<https://pagure.io/fedora-hubs/issues> &
<https://github.com/fedoradesign/fedora-hubs>

This section compares two design prototypes for the Fedora Hub. The top part shows two sets of contributor icons: 'Contributors (part-time, newer)' and 'Contributors (full-time, old-timers)'. Below this are two screenshots of the 'Community Hub (main)' at hub.fedoraproject.org. The left screenshot is labeled 'logged in' and shows a complex, multi-column layout with various content blocks. The right screenshot is labeled 'logged out' and shows a simpler, more focused layout with a 'Welcome' message and a 'Want to join?' button. To the right of these screenshots is a list of design inspirations: 'INSPIRATION: reddit, boingboing, slashdot, deviantart, facebook, g+, twitter'.

Process

FIRST MOCKUP

April 16, 2014

First full mockup + visual design for Fedora Hubs posted to Planet Fedora. Feedback continues to be favorable; excitement builds.

- blog.linuxgrrl.com/2014/04/16

The screenshot shows a web browser displaying a Fedora Hubs hub for the 'Fedora Design Team'. The page features a navigation bar with links like 'front', 'design-team', 'ambassadors', 'marketing', 'LATAM', 'planet', 'announce', and 'fedoralex'. A search bar is present in the top right. The main content area includes a welcome message, community rules, and a post from 'mizmo' about organizing a GitHub organization. A sidebar on the right contains a 'MEMBERS' section, a search bar, community rules, group owners, a chat window for '#fedora-design (Freenode IRC)', and a 'Supplemental Wallpaper' section for 'Fedora 20 - 2013'. Handwritten annotations in various colors provide feedback and suggestions:

- Global nav? not sure yet :)** points to the top navigation bar.
- user / profile config center** and **messaging center** point to user profile and notification icons.
- Customizable on a hub-by-hub basis; background file + logo graphic** points to the hub's header area.
- Design Team will provide a set of backgrounds that can be used** points to the main content area.
- Hyperlink Post from design-team@lists.fps** points to the 'Fedora Design Github org' post.
- These should come from libavatar** points to the user avatars in the chat window.
- Can pop up into separate window or shade** points to the chat window header.
- This should come from IRC** points to the chat messages.
- Naancier content** points to the 'Supplemental Wallpaper' section.
- Trac tickets from design-team** points to the 'Newest Open Tickets' section.
- 'member' role from FAS** and **'administrator' role from FAS** point to the 'MEMBERS' and 'GROUP OWNERS' sections.
- customize nav bar entries** points to the navigation bar.

Process

ENABLING NEW CONTRIBUTORS BRAINSTORM

March 25, 2015

Via an open call, we gathered a group of folks representing many teams across Fedora and had a formal brainstorm session on how to enable new contributors, mapping new contributor needs to potential Fedora Hubs features.

- blog.linuxgrrl.com/2015/03/25

Process

PROTOTYPING BEGINS

April 13, 2015

Threebean starts hacking on a prototype for Fedora Hubs, which later moves from github to pagure.io.

– github.com/ralphbean/fedora-hubs-prototype

The screenshot shows the GitHub interface for the repository 'ralphbean / fedora-hubs-prototype'. At the top, there are navigation links for 'Pull requests', 'Issues', and 'Gist'. Below the repository name, there are buttons for 'Unwatch' (8), 'Star' (6), and 'Fork' (4). The main content area displays a list of commits, grouped by date. The current branch is 'develop'. The commits are as follows:

- Commits on May 26, 2015**
 - Fully specify the url.** (5483631)
 - Try displaying the diagram in the readme.** (7917b1b)
 - A diagram.** (be5f689)
- Commits on May 23, 2015**
 - Thinking about EventSource.** (a1ce87f)
- Commits on May 22, 2015**
 - Make widgets slide in as they're ready.** (8a0ff00)
 - Make widgets artificially slow for development.** (2c6fe89)
 - Add a fedmsg config to get things working again.** (5e22adf)
 - Gunicorn!** (4de1edc)
 - Merge pull request #2 from ralphbean/feature/fragments** (cfc45f3)
 - Load page fragments asynchronously.** (77fce24)
 - Add caching around the API.** (a4fdd22)
 - Mention python3 in the readme.** (e96104f)
 - Get hubs working on python3 as well as python2.** (1da4a22)
 - Be careful for widgets that have no arguments.** (bc0ef8b)
- Commits on May 21, 2015**
 - Add some internal design notes.** (10511e5)
 - Remove unused import.** (076abc2)
 - Instructions for devs. Fixes #1** (partially visible)

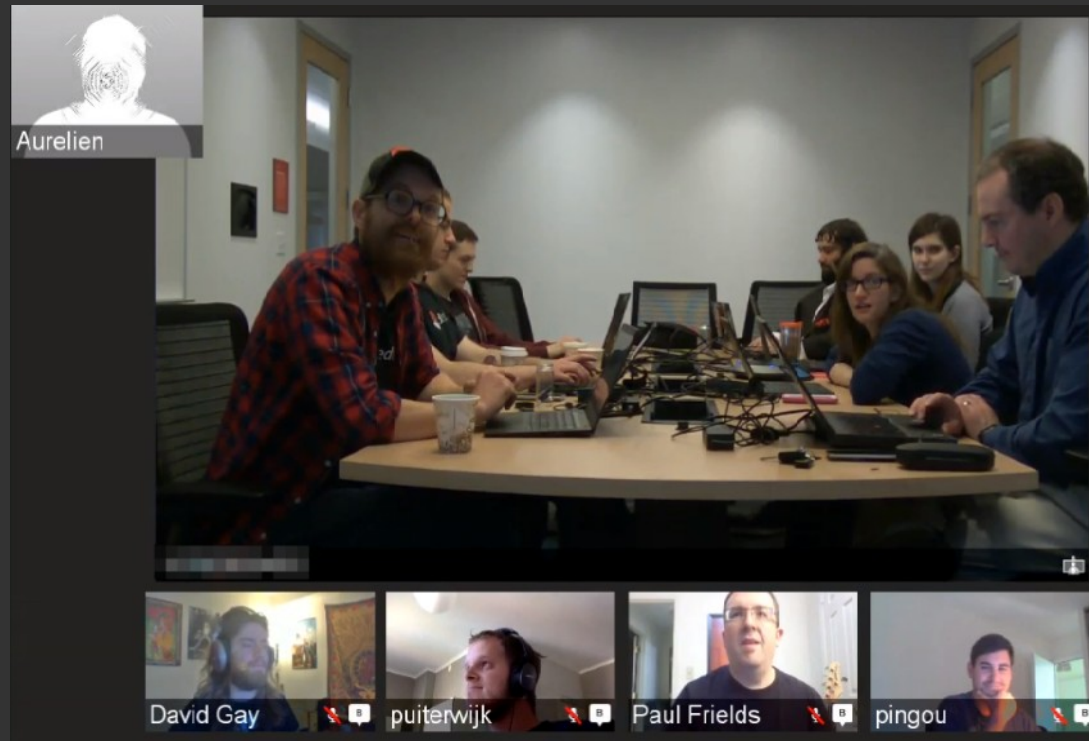

Process

FEDORA HUBS HACKFEST

June 4, 2015

We glom onto the front end of the Fedora Release Engineering FAD and have a hackfest for hubs, with design thinking games, a prototype demo, and full mockup review – plus some hacking, of course. :)

– blog.linuxgrrl.com/2015/07/01

Experienced Fedora Contributor

PAIN	GAIN
Too much info to parse / hard to keep up	One stop shop to keep up with what's going on
Info is manually updated; wiki pages, meta work required around things you do	Easier to explore parts of Fedora you don't know much about
Hard to do things when you're not at your own computer with your custom setup, so you can be limited in comms	Better visibility for your corner of Fedora / better home for documents
Limited mobile exp (phone / tablet)	Makes it easier to explain / showcase Fedora to other people / more visual
Limited offline experience	Better cross-functional historical archive of activity
Repetitive workflows - eg mapping pkgs in releasemonitoring.org	One URL / consistent URLs for teams to give people to help recruit contribs
Numb to pain	More consistent cross-team joining process
Finding stuff is hard bc of inconsistencies across projects / teams	Much easier to start new groups / projects
Less drivebys, more park and eat a meal	Cross-team project materials will have a home
Enable drive-by contributions instead of ppl driving away	More consistency in experience to new contribs - one place to point ppl who wants to join

New Fedora Contributor

PAIN	GAIN
Strong personalities in existing contribs	A map with a compass
What is a mailing list / SSH key / IRC / wiki /?	You can actually see what a team works on and determine if it's the type of work you want to do ahead of time
A whole lot to learn in one go	Less overwhelm in joining a team
Who's who in Fedora?	Can get starting doing actually work on Fedora more quickly
What should / can I work on?	A more comfortable onboard exp
How do I communicate with people?	A high-level view of things across Fedora that you're interested in
Where will people actually respond to me? is ML / IRC / Google Group / etc the place where the action is taking place?	More streamlined onboarding flow
It's hard to do drive-by contributions	Don't need to install a bunch of things up front to get started - can do everything thru web browser
IRC nickserv issues	Don't need to figure out IRC to communicate
The documentation that exists is often well out of date	Don't need to subscribe to mailing lists and have to filter stuff as to not drown
	Removes a lot of meta work
	Real-time updates for things happening in Fedora / less out of date info

**More mockups,
more prototype development...**

Let's see the progress!

UI Mockups

- Individual vs team-based hubs
- Widget-based approach
- Many more mockups were produced than are shown here, these are simply a small selection
 - <https://github.com/fedoradesign/fedora-hubs>
 - <https://meghanrichardson.wordpress.com/>

Personal Hub Stream

The screenshot shows a Fedora Personal Hub interface for user 'tatica' (Maria tatica Leandro). The top navigation bar includes a search bar and a list of hubs: me, designteam, ambassadors, marketing, LATAM*, planet, announce, fedoranext, welcome*, and qa. The main content area displays a stream of notifications and updates, such as 'Fedora LATAM Ticket #347 - Request for Fedora Swag' and 'You've been assigned action items in a meeting'. The right sidebar contains several widgets: 'SUBSCRIBERS' (19) and 'SUBSCRIBED TO' (27) with a '+ Subscribed' button; a search bar for the hub; an 'About' section with placeholder text; a 'Library' section with a list of items; a 'Hubs' section listing subscribed hubs; and a 'Badges' section showing various achievement icons.

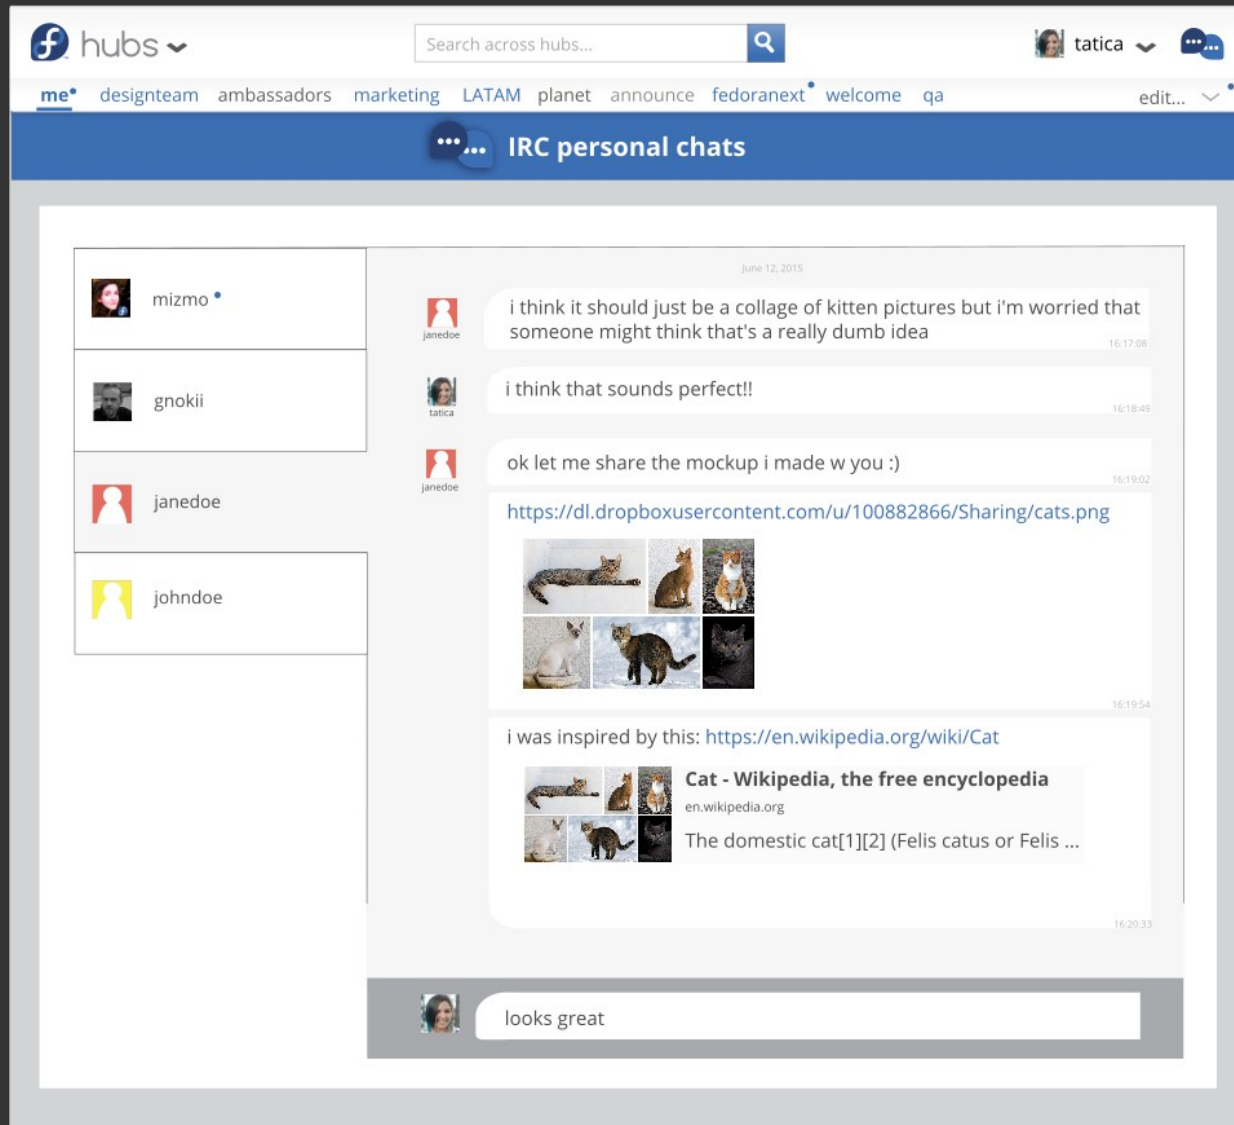

- Main content collects notifies across Fedora apps
- Right sidebar contains permanent widgets with user info

Team Hub

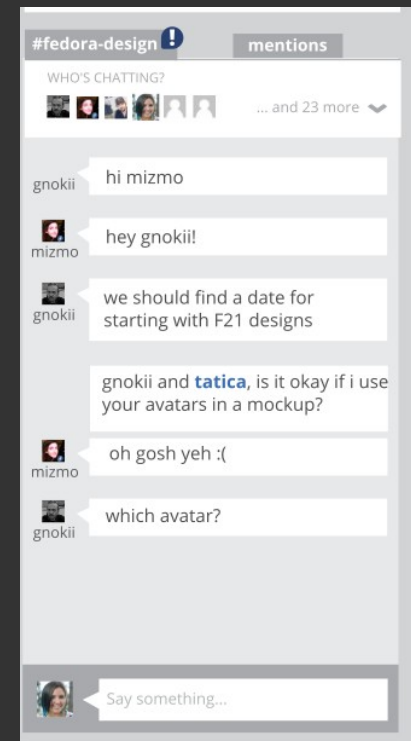

The screenshot shows a 'Fedora Design Team' hub page. At the top, there's a search bar and navigation tabs for 'designteam', 'ambassadors', 'marketing LATAM', 'planet', 'announce', and 'fedoranext'. The main content area features a post from 'mizmo' titled 'Fedora Design Github org' dated 'Tuesday at 14:10'. The post text discusses organizing a website redesign effort and mentions a Github organization. Below the post, there are 15 comments and 9 participants. A comment from 'Bryan Sutherland' dated 'Yesterday, 21:54' asks to be added to the Github organization. Below this, there's a section for 'Fedora 21 Sketch Idea' dated 'Monday at 22:15'. On the right sidebar, there are statistics for 'MEMBERS' (46) and 'SUBSCRIBERS' (1,845), along with buttons for '+ Subscribe', '★ Star', and 'Join Hub'. Below these are sections for 'COMMUNITY RULES', 'GROUP OWNERS' (listing 'tatica', 'gnokii', 'mizmo', 'ryanlerch'), 'MEETINGS' (stating 'This team meets every two weeks on Tuesdays at 12 PM ET'), 'Meeting Reminders' (with dates 'Nov 04' and 'Nov 12'), and '#fedora-design (Freenode IRC)'.

- Main content collects discussions and contributions
- Right sidebar contains widget tools for communication and coordination

IRC on Hubs

- Support for IRC PMs
- Handles mentions in hub group chat

Hub Membership

- Subscribing vs Membership vs Starring
- A user's personal content is also subscribe-gated

The image shows three panels illustrating membership status transitions on a hub page. Each panel displays 'MEMBERS 46' and 'SUBSCRIBERS 1,845'.

- Panel 1:** Shows the initial state with buttons for '+ Subscribe', '★ Star', and 'Join Hub'.
- Panel 2:** Shows the state after subscribing, with buttons for '✓ Subscribed', '★ Starred', and 'Member'.
- Panel 3:** Shows a confirmation dialog box with the text 'unsubscribe from fedora-design?' and buttons for 'cancel' and 'unsubscribe'. The 'Member' button is still visible below.

This screenshot shows the profile page for a user named 'tatica' (Maria tatica Leandro). The page includes a search bar, navigation links (me, designteam, ambassadors, marketing, LATAM, planet, announce, fedoranext, welcome, qa), and a 'Subscribe' button. The user's profile picture and name are visible at the top.

This screenshot shows the activity feed for a user named 'tatica' (Maria tatica Leandro). The feed includes several items:

- Fedora LATAM Ticket #347 - Request for Fedora Swag:** Ticket #347 has been assigned to tatica. 9s
- mizmo mentioned tatica in a posting:** 30m
- gnokli replied to tatica's post:** 30m
- tatica has a new sponsorship request for the design-team group:** 6h
- ryanlerch, banas, and 10 other people liked tatica's post:** 7h. "Here is an awesome plan for Fedora marketing..."

The right sidebar contains an 'About' section with placeholder text and a 'Library' section with a list of items. A 'Subscribe' button is visible at the bottom of the feed.

The Prototype

- Currently in progress
- The backend data comes from fedmsg; the frontend application layer is Flask (with the potential to also use AngularJS in the future)
- Runs in a virtualenv for now
 - localhost
 - <https://pagure.io/fedora-hubs/blob/develop/f/README.rst>

Next Steps

- Interviews across multiple Fedora teams to ensure more specific needs are met
- Continuing to develop the prototype
- Beginning to test the prototype on potential users

Getting Involved

- Design mockups are in Github:
 - github.com/fedoradesign/fedora-hubs
- Development is in Pagure ('develop' branch):
 - pagure.io/fedora-hubs

Getting Involved

We use the Pagure “Issues” tracker to track atomic features that need to be developed. Many of these are individual widgets that are nicely-sized chunks of work to pick off to get involved in development.

The issue tickets themselves also serve as 'specs' for the features they are for, so any design suggestions or help can be provided there, too.
